

AUTHOR: D. Whelan

YEAR: 1999

PUBLISHER: The Joint United Nations Programme on HIV/AIDS (UNAIDS)

This document is a review of factors affecting men and women's increased susceptibility to HIV and programme responses to reduce this risk. Gender-awareness programmes have focused on improving access to information regarding HIV/AIDS and sexuality and reproduction, as well as the improvement of appropriate services and technologies. Studies additionally show that interventions to improve women's economic and social status can have a significant effect on reducing some of the key gender-related barriers they face in protecting themselves from HIV infection.
